

ENTERPRISE XDR ROLLOUT

Security Monitoring Enhancement Project

Technical Writing Portfolio

XDR Implementation

1 BACKGROUND

- Improve security visibility across critical servers and services
- Strengthen protection against advanced cyber threats
- Enable faster threat detection and incident response
- Reduce risks of malware, ransomware, unauthorized access, and data breaches
- Minimize operational disruptions caused by security incidents

2 OBJECTIVE

- Enhance centralized security monitoring and visibility
- Enable faster detection of suspicious activities and cyber threats
- Accelerate investigation and incident response processes
- Strengthen server protection against malware, ransomware, and unauthorized access

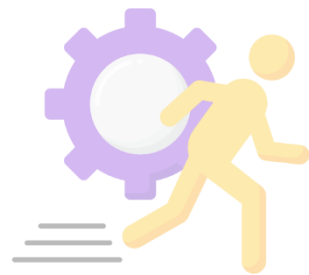

3 BENEFIT

- ✓ **Improve** centralized security visibility and monitoring.
- ✓ **Enable** faster cyber threat and suspicious activity detection.
- ✓ **Accelerate** investigation and incident response.
- ✓ **Reduce** risks of malware, ransomware, and unauthorized access.
- ✓ **Simplify** alert correlation and threat analysis.
- ✓ **Improve** security monitoring and threat hunting effectiveness.

4 ACTION

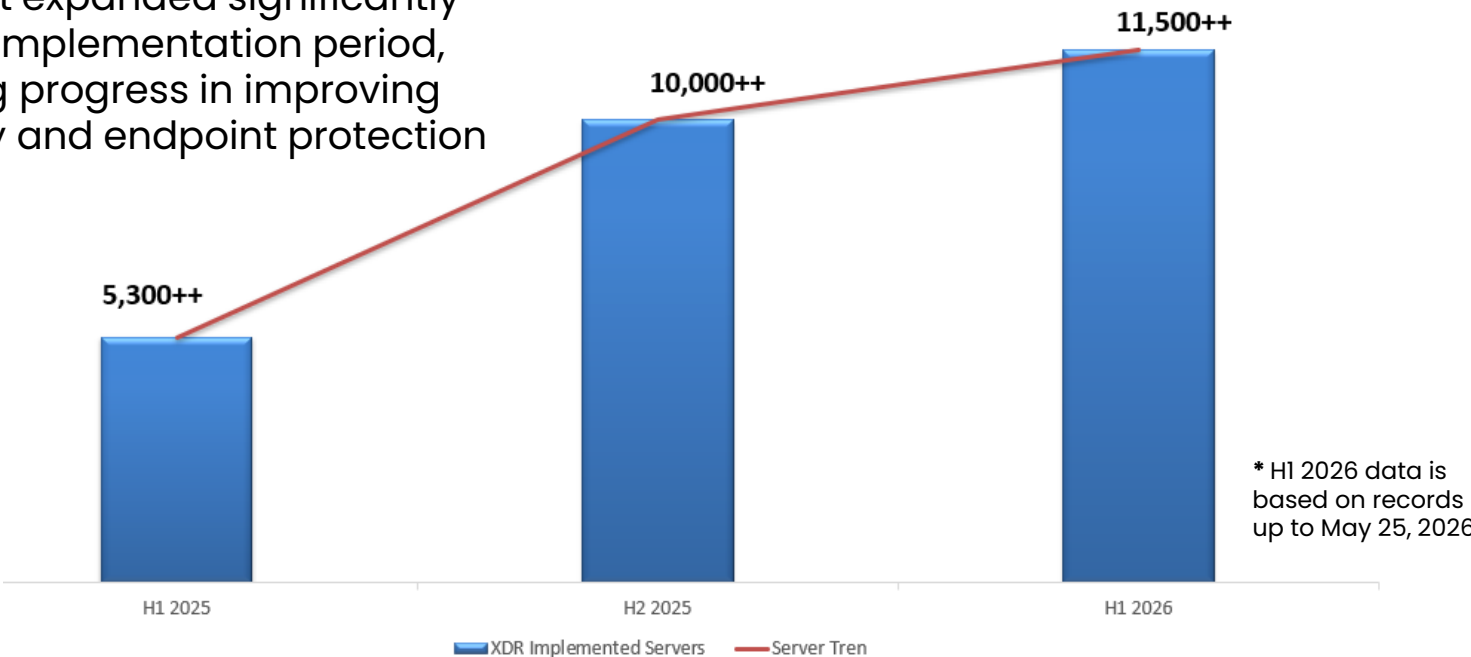

- ❑ Additional server assets were onboarded to expand XDR coverage and improve security visibility.
- ❑ XDR deployment increased significantly during the implementation period..
- ❑ Current implementation supports multiple Enterprise server environments.
- ❑ The expansion aims to strengthen security monitoring, threat detection and endpoint protection capabilities.

5 SOLUTION DESIGN

SAMPLE TOPOLOGY
ENTERPRISE XDR ROLLOUT

6 RESULT

XDR deployment expanded significantly throughout the implementation period, reflecting strong progress in improving security visibility and endpoint protection coverage.
