Trend Micro Cloud App Security **Add-in**

BACKGROUND

Cloud App Security Add-in

CLOUD APP SECURITY ADD -IN

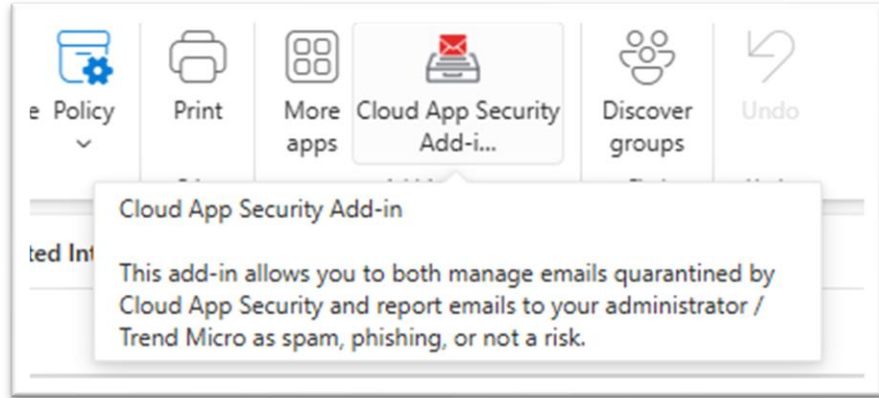

Cloud App Security Add-In is a feature from Trend Micro that integrates directly with Microsoft Outlook. It allows users to easily report suspicious emails, view email scan results, and access quarantined messages — all from within their inbox, without needing to open a separate portal. This add-in empowers users to play an active role in protecting their organization's email security in a simple and user-friendly way.

CLOUD APP SECURITY

Trend Micro Cloud App Security is an advanced security solution designed to enhance protection for cloud-based platforms such as Microsoft 365 and Google Workspace. It adds an extra layer of defense against modern threats like phishing, spam, malware, and Business Email Compromise (BEC) by integrating directly with cloud email services.

Why It's Critical to Implement?

With the add-in in place, employees can report suspicious emails instantly with a single click, without needing to manually forward or save the original email and send it to the SOC team. This not only simplifies the reporting process but also ensures that threats are flagged and handled more efficiently.

By reducing friction in the user experience, organizations can empower employees to be the first line of defense, while enabling security teams to act faster and with better context.

What Types of Emails Can Be Reported Using the Trend Micro Cloud App Security Add-In?

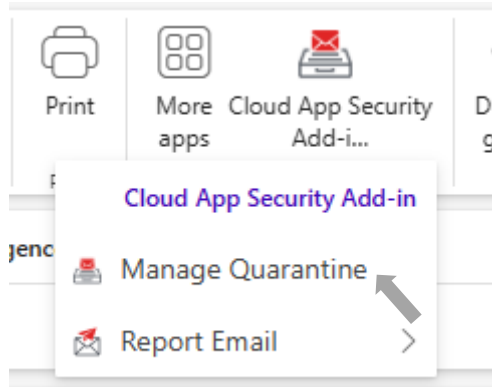

The Cloud App Security Add-In allows users to report various types of suspicious or unwanted emails directly from Outlook. This includes:

- ✓ Spam – Unwanted or irrelevant emails.
- ✓ Phishing – Emails that attempt to steal personal or sensitive information.
- ✓ Not a Risk – Used to mark an email as safe if it was incorrectly flagged as a threat.

Key Features of the Cloud App Security Add-In

Managed Quarantined

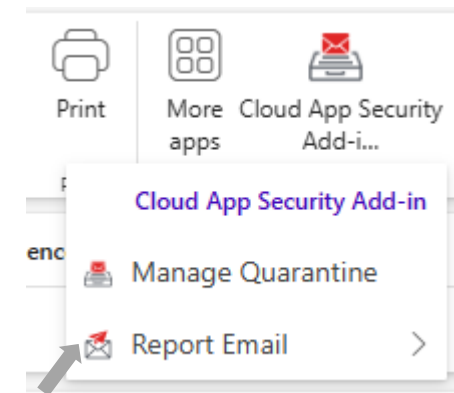

Allows users to view and manage emails that have been quarantined by Cloud App Security, directly from their Outlook interface.

Enables end-users to report suspicious emails with a single click. The report options include:

- Spam – To report irrelevant or annoying emails.
- Phishing – To report attempts of fraud or data theft.
- Not a Risk – To mark emails that were mistakenly identified as threats.

Report Email

Key Advantages of the Cloud App Security Add-In

Direct integration with the email client

Users can easily report phishing or suspicious emails directly through the add-in without having to manually forward them to the SOC/IT team.

Improves awareness and response time

Helps educate users to recognize suspicious emails and accelerates investigations since reports are sent directly to the CAS system.

Strengthens compliance and audit trail

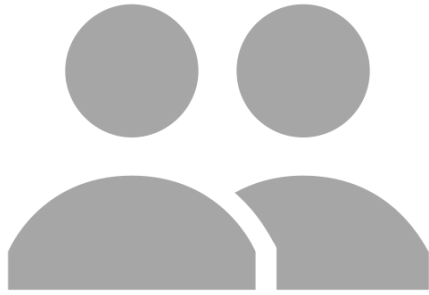

Every report submitted through the add-in is logged, making it easier for the security team to track, investigate, and document incidents.

Enhanced MTTR and MTTD

By streamlining the reporting process and automating initial analysis, the add-in helps reduce Mean Time to Detect (MTTD) and Mean Time to Respond (MTTR) for security incidents.

Potential Drawbacks from the User Perspective

Requires user training

Not all users are familiar with how to use the add-in, which may lead to misclicks or underutilization.

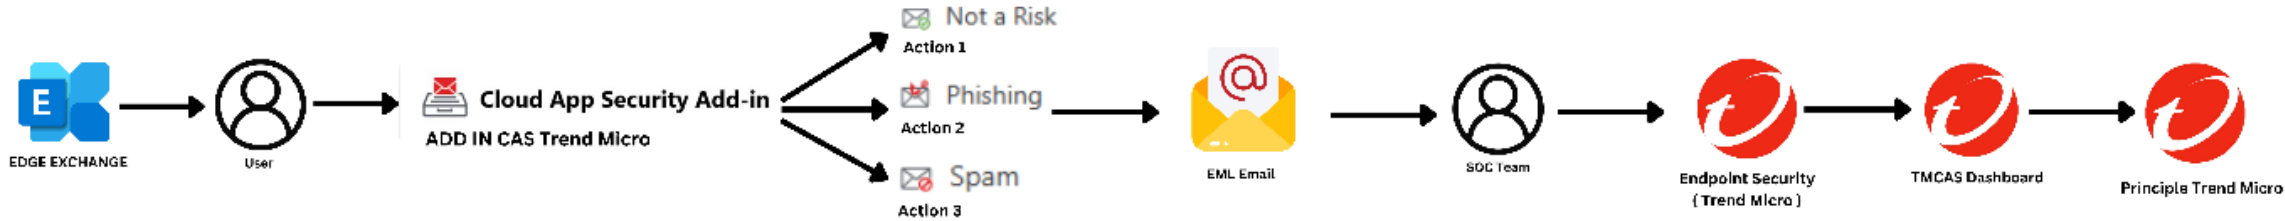

Potential for false reports

Users may mistakenly report legitimate emails as phishing, which can increase the workload for the Security team.

Flowchart Add In Trend Micro

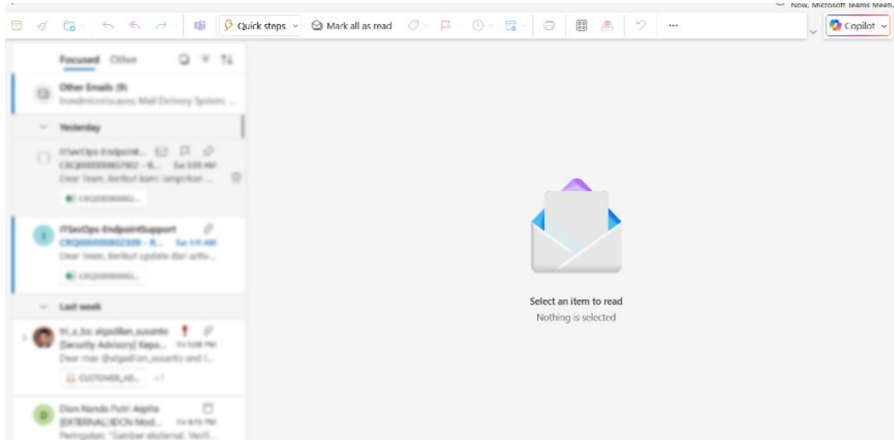

Proposed to Enabled

We would like to inform you that for the implementation of the Cloud App Add-in, only the "Report Email" feature will be enabled. This feature allows users to report suspicious emails with a single click. The available reporting options include:

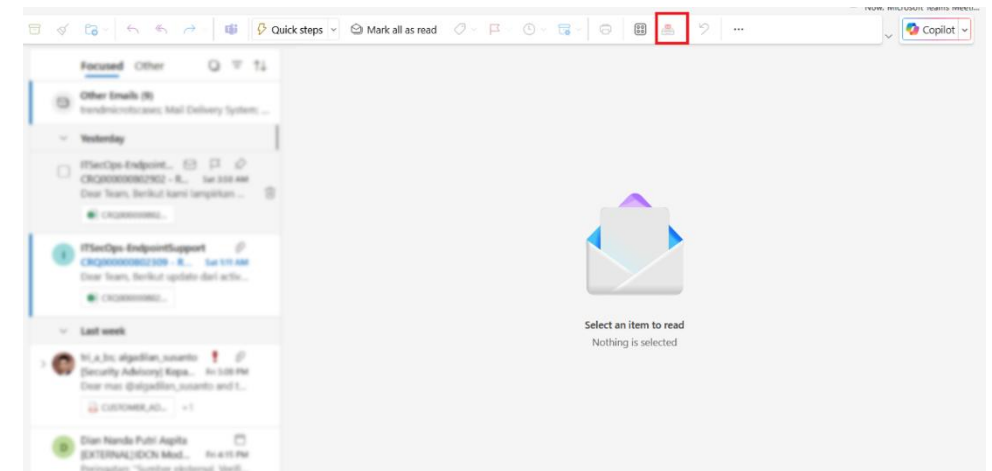

- ☐ Spam – to report irrelevant or unsolicited emails
- ☐ Phishing – to report fraudulent or malicious attempts
- ☐ Not a Risk – to mark emails that were incorrectly flagged as threats

How to use the Cloud App Security Add-In to Microsoft Outlook

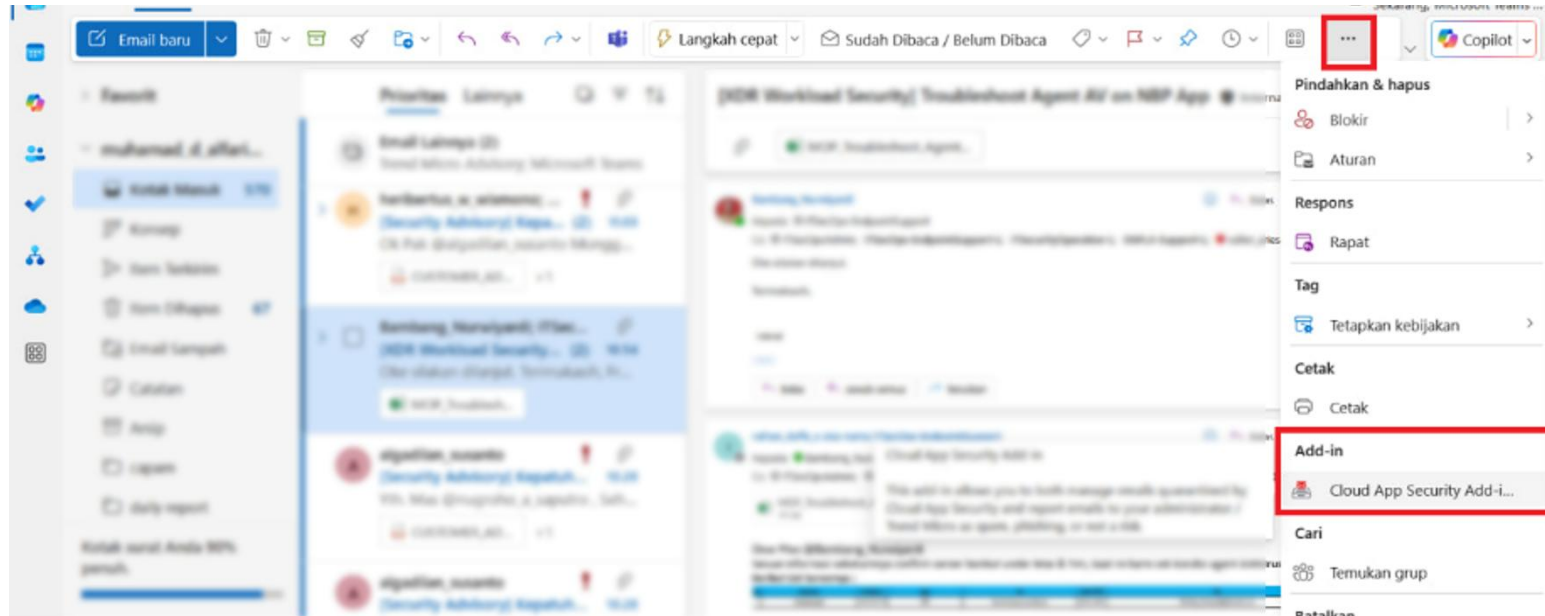

1. Open Microsoft Outlook, either the web version or the desktop app.

2. The Cloud App Security Add-In should already be available in your Outlook.

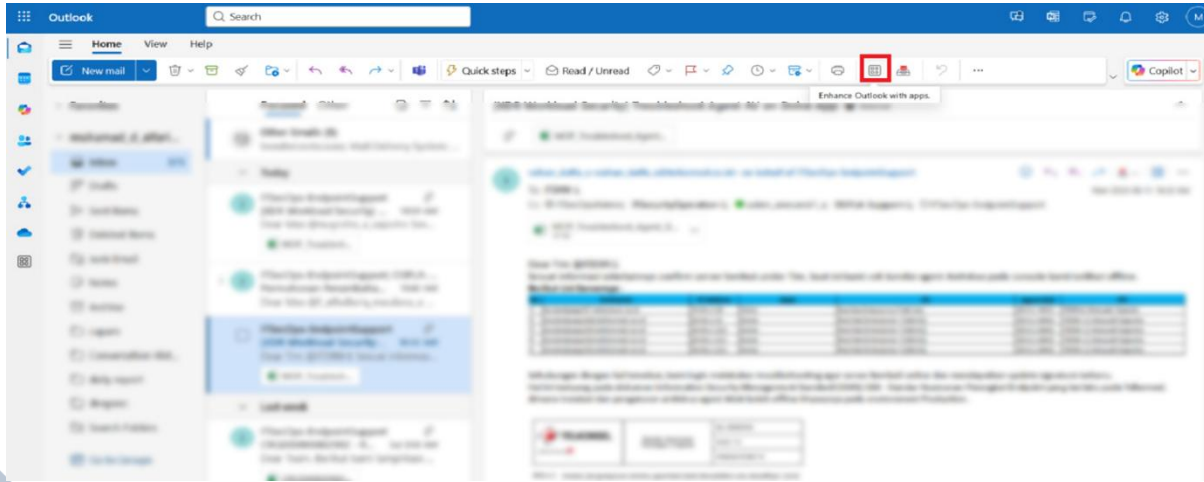

How to use the Cloud App Security Add-In to Microsoft Outlook

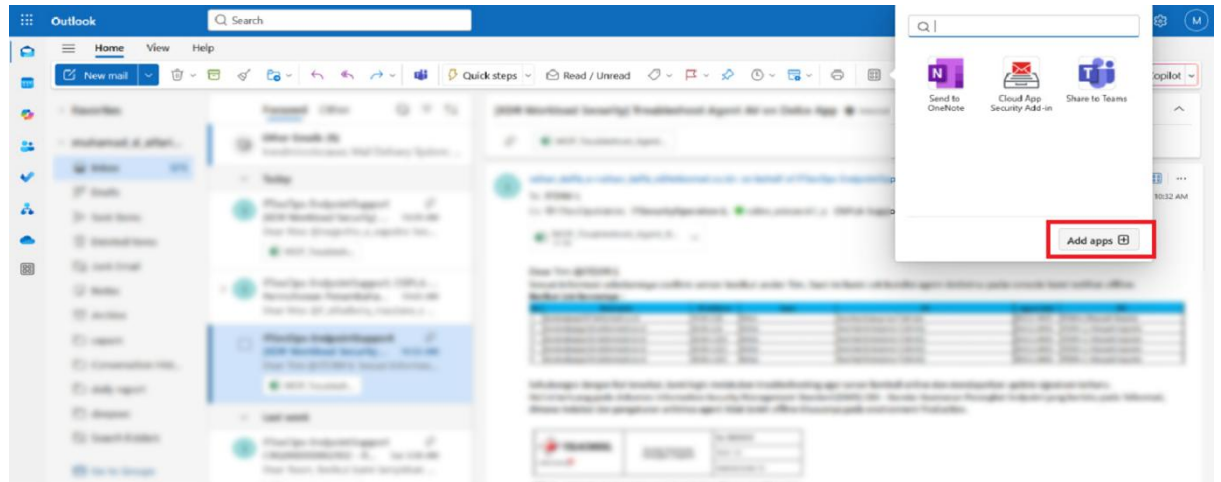

3. If it's not visible, click the three-dot menu (:) in the upper-right corner — the Cloud App Security Add-In should appear there.

How to use the Cloud App Security Add-In to Microsoft Outlook

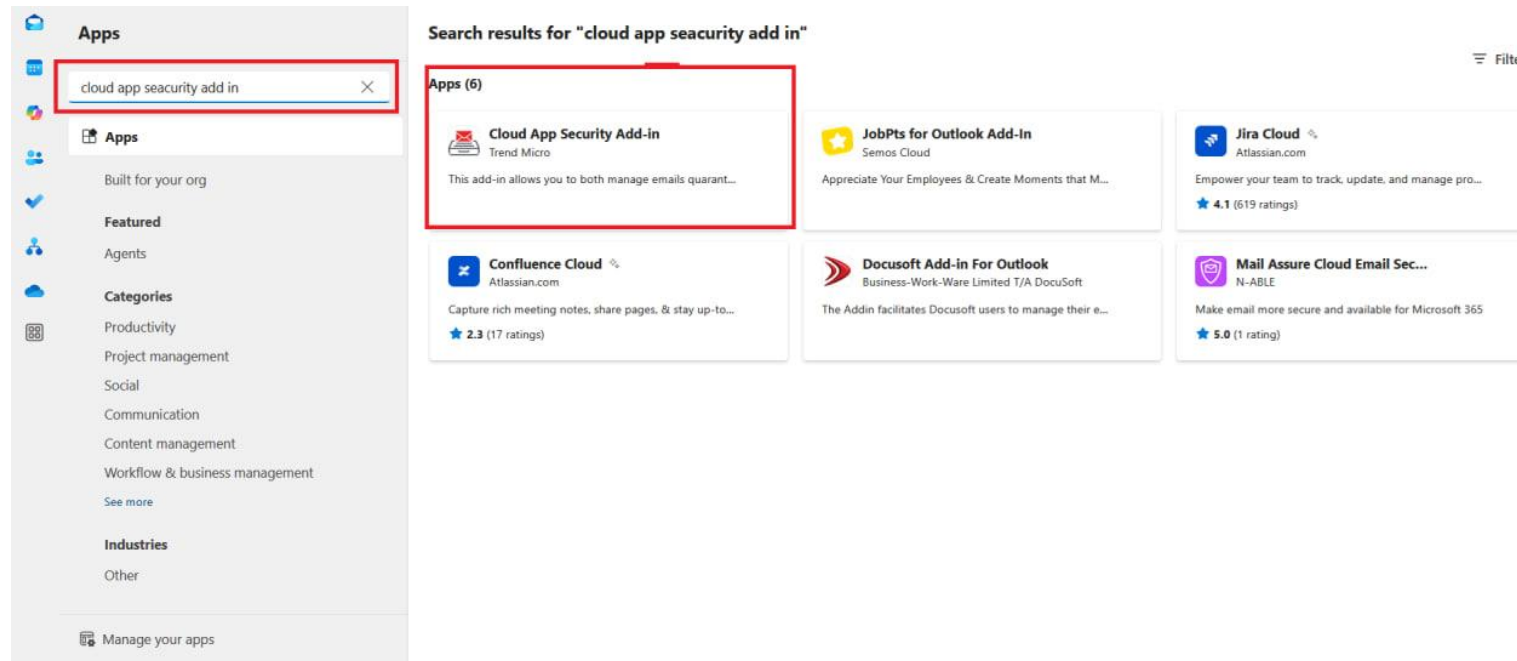

4. If it is not yet available, you can add it by using the 'Enhance Outlook with Apps' feature

5. Please click or select 'Add App' from the options below.

Legend

- User Activity
- Security Team Activity
- Ops (Operation) Activity

Key Advantages

- ✓ The reporting process becomes significantly simpler, as users only need to perform a single click on the Outlook add-in without having to manually forward the email. This minimizes technical errors and saves users' time when reporting phishing or suspicious emails.
- ✓ Security team can directly receive reports automatically through the system, thereby reducing the risk of delayed information delivery and ensuring that every report is immediately integrated into the security analysis workflow.
- ✓ With this integration, the entire reporting and incident handling workflow becomes faster, more structured, and more efficient, ultimately enhancing the effectiveness of threat detection and response to cyber risks delivered via email.
